Go to plugin manager and click on Autodesk ECAD Key Generator. On the next window enter the serial number of your ECAD (you can get it from your license) and click next. Next, you will be asked to choose the ECAD you want to use this keygen for, I chose to use, 'DAZ Studio' for simplicity, after, you will be asked to copy the serial number and key in the 'ecad key generator' dialog. Click 'ok' then you will see a window with the serial number, click 'ok' again then you will see another window with a key. Go to your ECAD and run the e3i serial number from the first window and click 'ok' again. The serial number you chose will be exported and saved in your Autocad. E3i is free for personal use only, commercial license should be purchased from Autodesk. I hope this was useful and helps you guys. New Display Options for Drawing Viewports: For fast access to the “Selection” tool (via the ARROW buttons), new commands show the current selection, and commands called “View Selection” dynamically update the viewport display to show only the selected area. (video: 1:28 min.) The next time you start a drawing, you’ll see a button with which you can quickly close open drawing windows. Also, when you open a drawing, you’ll see a button that lets you quickly close other open drawings. The “Lock Active Window” command lets you hold open only the drawing that you’re working in. The “Unlock Active Window” command lets you close the active drawing window. The “Lock all Windows” command can be used to keep all open drawings closed while you perform a drawing activity. You can also drag and drop files into and out of drawings, making it easier to organize drawings. The “Block Viewport” command lets you keep a window from getting in the way when you’re working. You can open the recently closed drawings on a separate page when you’re starting a new drawing. The “Open Drawings History” command lets you see a list of all the drawings you’ve ever opened. Integration with Google Drive: Working with files in Google Drive is now easier than ever, thanks to collaboration and file exchange functions. With the “Copy as Link” command, you can send a link to a drawing in Google Drive and share it with other users who have Google Drive access. You can also copy and paste files from a Google Drive drawing into AutoCAD. You can use the Google Drive command to send files directly to AutoCAD. You can use this command when you’re ready to send the file, but not until after you have created a new drawing. You can download, upload, and share existing files in a Google Drive folder using the “Download” command. You can
