Beyond the tools and processes Photoshop Elements provides, the program also comes with an arsenal of options that allow you to customize your tool bar, fonts, and interface to better fit your own needs. One of my favorite tools is the tool for creating custom brush sets, and while there are a lot of brush types, the selection of brushes—and the customizable colors within them—dwarfs Photoshop's hundreds. In addition, Photoshop Elements is also home to collections like the Browse Photos option (where you can browse your hard drive or the Adobe Cloud for images that match your criteria), the Grid option, the History option, the Map option, and a great number of others. Additionally, the people who created Photoshop Elements did a fantastic job of building intuitive workflow options in the program. However, I took particular issue with Photoshop Elements' inability to customize the background of your documents and panels. The program allows you to turn on the ability to change the background of your documents based on which zone you're working in, but you can't change the background only for specific document types without having some manual work to do. I'm sure that choice was made with good intentions, but I wish that they'd allowed this as an option for all document types. Also, although Photoshop Elements saves your edits in your collection of Adobe Cloud Documents, you can only upload Cloud Portfolios that you've created in the application itself. Additionally, with the release of Photoshop CC, Photoshop Elements has fallen behind. While Adobe has created elements of AI, the team working on Elements has not, and you cannot use certain AI tools without the CC version.
