I liked the launch, which was fast, simple, and self-contained. But I found the output file confusing, and I wish there had been a smaller, no-frills Photoshop-only edition, as well as a Lightroom-only version. Both are available for purchase, but not for free download. That's a disappointment, because this lets Adobe develop these programs as their main focus. First impressions are that Lightroom 5.3 is a minor release but still contains a lot of many improvements. And I haven't found anything incorrect. In fact, I'm not sure if there is anything inadequate in the comparison. So I am really like part of the Lytro community. A tried and true tool. I have paid for both the Express and full versions many times and have rarely been disappointed, but I cannot say this for Adobe Lightroom. The vector and more powerful masks are awesome, but I do not like the interface. The pre-filled presets for basic editing are great. But the templates are not easy to select from and are an afterthought to a mediocre image. I'm not a big fan of the clutter of color adjustments either. The best of Photoshop. Also, it has a very good Comments option, thanks to the fact that it integrates well with Lightroom and has its own Focus panel. In addition, the eraser tool has great usability - not just a simple stroke tool like other painting programs. There are also the "magic" brushes, like the oil paint brush for instance. Plus, there are numerous options for color correction and adjustments.

The image editing part is what most of you (and myself) are going to use. There are two main parts to this: the raw editor and the photo editor. The raw editor is the part that is used to import, edit, and share RAW images. This is the part that we photographers are going to use - we're going to use this to edit out our photos to convert, correct, and then lighten and get the color looking just the way that we want. The photo editor is what applies our edits to the photos and does the output. A lot of people seem to struggle with the idea of creating their own websites when they don't really know the basics. Until now, after a lifetime of working in the digital space, I still don't know a lot about designing for the web. For years, I wasn't really sure what web design was, and what even constituted a website. There is a lot to learn about designing websites. Learn the basics of HTML, CSS, an a bit about JavaScript. To learn more about what is involved in web design check out this resource from A List Apart: The very first web browser many of us used was Netscape. It was pretty good. It was easy to navigate and you could save web pages to disk. The problem was it was slow as molasses. It had no feedback. Hit enter and then click and wait for the browser to load the page. There was no zoom. Lightroom CC for iOS has been a huge hit, and we continue to look forward to its future as an exciting addition to the Adobe Creative Cloud experience. But I have to be honest: I'd love to see us bring even more major improvements in features and performance to the desktop version of Lightroom. e3d0a04c9c
